## APTABIO ${ }^{\text {TM }}$

## Lipofector-2000 Reagent

## Cat. No. AB-LF-2002 Size: 1.5 ml Store at $+4^{\circ} \mathrm{C}$ (do not freeze)

## Description

Lipofector-2000 Reagent (Cat. No. AB-LF-2002) is designed for the transfection of DNA or RNA into eukaryotic cells. Lipofector2000 is a polycationic liposomal reagent, offering outstanding transfection efficiency with easy Procedure, in the presence or absence of serum.

## Guidelines for Transfection

1. Prepare complexes using the amount of DNA or RNA and Lipofector-2000 recommended on below table. Optimizations are necessary. We recommend using serum free medium to dilute Lipofector-2000 and DNA or RNA.

To transfect cells in different tissue culture formats, vary the amounts of Lipofector-2000, DNA or RNA, cells, and medium as shown in the table 1 and table 2

Table 1. Reagent quantities for general recommendation

| Culture <br> vessel | Surface <br> area <br> $\left(\mathbf{c m}^{2}\right)$ | Vol. of <br> plating <br> medium | DNA or RNA <br> $(\mu \mathrm{g})$ in <br> media vol. $(\mu \mathrm{l})$ | Lipofector- <br> $\mathbf{2 0 0 0}$ <br> $(\mu \mathrm{l})$ |
| :---: | :---: | :---: | :---: | :---: |
| 96-well | 0.3 | $100 \mu \mathrm{l}$ | $0.1 \mu \mathrm{~g}$ in $25 \mu \mathrm{l}$ | $0.25 \mu \mathrm{l}$ |
| 48 -well | 0.7 | $200 \mu \mathrm{l}$ | $0.2 \mu \mathrm{~g}$ in $50 \mu \mathrm{l}$ | $0.5 \mu \mathrm{l}$ |
| 24-well | 2 | $500 \mu \mathrm{l}$ | $0.4 \mu \mathrm{~g}$ in $50 \mu \mathrm{l}$ | $1 \mu \mathrm{l}$ |
| 12-well | 4 | 1 ml | $0.8 \mu \mathrm{~g}$ in $50 \mu \mathrm{l}$ | $2 \mu \mathrm{l}$ |
| 6-well | 10 | 2.5 ml | $1.5 \mu \mathrm{~g}$ in $100 \mu \mathrm{l}$ | $4 \mu \mathrm{l}$ |
| $60-\mathrm{mm}$ | 20 | 10 ml | $3 \mu \mathrm{~g}$ in $100 \mu \mathrm{l}$ | $8 \mu \mathrm{l}$ |
| $100-\mathrm{mm}$ | 56 | 30 ml | $6 \mu \mathrm{~g}$ in $200 \mu \mathrm{l}$ | $20 \mu \mathrm{l}$ |

Table 2.Reagent quantities for optimizing transfections (24 well)

| Cells | DNA or RNA | Lipofector-2000 |
| :---: | :---: | :---: |
| Sensitive cells <br> Note 1 | 0.25 ug | $0.5 \mu \mathrm{l}-1.0 \mu \mathrm{l}$ |
| Most cell lines <br> Plasmid expression | 0.5 ug <br> 0.75 ug | $1 \mu \mathrm{l}-3.0 \mu \mathrm{l}$ <br> $1.5 \mu \mathrm{l}-4.5 \mu \mathrm{l}$ <br> Suspension and robust cells <br> Note 2 <br> ug <br> $2 \mu \mathrm{l}-6 \mu \mathrm{l}$ c |

Note 1. (Examples are HT1080 and Hela)
Note 2. (Examples are MCF7, Jurkat, HL60 and A549)
2. Don't add antibiotics to media during transfection procedure.
$3.70-90 \%$ confluence at the time of transfection is recommended for high efficiency and to minimize cytotoxicity. Optimization should be necessary.
4. Test serum-free media for compatibility with Lipofector-2000 since some serum-free formulations may inhibit liposomal transfection.
5. To avoid microbial contamination all solutions should be sterile-filtered before use and subsequently be handled under aseptic conditions, as is common practice for handling cell cultures.

## Transfection Procedure

Use the following procedure to transfect adherent mammalian cells in a 24-well format. For other formats, see table 1

1. [Cell culture] Plate the cells the day before the transfection experiment. The appropriate plating density for a particular cell line will depend on the growth rate and the shape of the cells. The cells should be 70-90\% confluent on the day of transfection. As a general guideline, plate $2-6 \times 10^{4}$ cells in $500 \mu \mathrm{l}$ culture medium with the usual amount of serum.
2. [DNA or RNA dilution] Dilute $0.4 \mu \mathrm{~g}$ (or $0.25-1.0 \mathrm{ug}$ ) DNA (or RNA) in $50 \mu$ l of serum free medium (or other appropriate medium) without serum and mix gently. .
3. [Lipofector-2000 dilution] Dilute $1 \mu \mathrm{l}$ (or $0.5-6 \mathrm{ul}$ ) Lipofector-2000 in $50 \mu \mathrm{l}$ of serum free medium (or other appropriate medium) without serum and mix gently.
4. [Complexes formation] Combine the diluted DNA (or RNA) (from step 2) and diluted Lipofector-2000 (from step 3). Mix gently and incubate for 15 minutes at room Temperature or $4^{\circ} \mathrm{C}$. (approximate total volume $=100 \mu \mathrm{l}$ )
Note 3. Some plasmid or high density of DNA or RNA are better in $4^{\circ} \mathrm{C}$ incubation.
5. [Transfection] Add the 50 ul of diluted complexes (DNA or RNA + Lipofector-2000 / from step 4) to each well. Mix gently by rocking the plate.
6. [Cell culture] Incubate cells at $37^{\circ} \mathrm{C}$ in a $\mathrm{CO}_{2}$ incubation for further investigation. If toxicity is problem, replace medium with fresh, complete medium 4-6 hours after transfection. (with normal amount of serum).
